

Context variables

The bot context and visitors fields are used to store the information temporarily collected from the visitor until the conversation ends and use it across flows to make decisions and perform actions based on it.

Zobot - The best chatbot for your website | Zoho SalesIQ
Zoho SalesIQ

Watch on

Bot context

- The bot context is a variable that can be used to store/save the response from the visitor for a particular card. In the below reference, when the visitors provides the location details, it will be saved in the bot context variable (location.option). And this variable can be used in other card to get respective value.
- To save the visitor's response, click on the Save in bot context check box and provide the variable name.

The screenshot shows the Zoho Creator interface with a flowchart on the left and a configuration panel on the right. The flowchart consists of three cards: 'Flow 2 B & 3 - Phone Card', 'Flow 2 B & 3 - Calendar Card', and 'Flow 2 B & 3 - Location Card'. The 'Location Card' is selected, and its configuration panel is open. The panel has the following fields:

- Name ***: Flow 2 B & 3 - Location Card
- Message ***: Please share your location to schedule the delivery.
- Type % for dynamic text suggestions**: ☐ Save in visitor field ☒ Save in bot context
- Field name ***: location.option
- Show Map text**: Share Location
- Submit location text**: Send my locale
- Buttons**: Cancel, Save

- Type % in the card's message text box/email content to avail all the bot context available in the bot.

The screenshot shows the Zoho Creator interface with a flowchart on the left and a configuration panel on the right. The flowchart includes cards for 'Flow 2 B & 3 - Calendar Card', 'Flow 2 B & 3 - Location Card', 'Flow 2 B & 3 - Order Confirmation', 'Flow 2 A - Lead (upcoming)', 'Button Card 153', 'Go to Card 163', and 'End Card 153'. The 'Send Email' card is selected, and its configuration panel is open. The panel has the following fields:

- Send Email**: user@example.com
- CC**: pboyle@zillium.com, user@example.com
- Subject ***: Order Confirmation - %buy.option% is Successful
- Type % for dynamic text suggestions**: ☐ Save in visitor field ☒ Save in bot context
- Email content ***: Shipped Address: %location%
Expected Delivery: %date.option%
- Type % for dynamic text suggestions**: ☐ Save in visitor field ☒ Save in bot context
- Attachments**: No file type variables found.
- Buttons**: Cancel, Save

Example

- Let's take an e-commerce service where you need to send an order confirmation email once your visitors place an order via Zobot. Store the values required in a bot context on each block as shown in the below reference and use them on the send email card to send order confirmation emails to the visitors.

Email (Flow 2 B & 3 - Email Card)

Name: Flow 2 B & 3 - Email Card

Message: Nice name, %visitor.name%, may I know your email?

Hint text: Enter your Email address

Default value: %visitor.email%

Error message: Enter a valid email

Send Email (Flow 2 B & 3 - Order Confirmation mail)

Name: Flow 2 B & 3 - Order Confirmation mail

To: user@example.com

CC: user@example.com

Subject: Order Confirmation - %buy.option%

Email content: Hi %visitor.name%
Your order for %buy.options% has been successful. The order will reach you on %date.option% at %location.option% as per your preference.

Multiple Options (Flow 3 - oneplus)

Message: Good choice, These are the available OnePlus phones, Kindly select your preferred option?

Field name: buy.option

Item name: (3)
OnePlus Nord CE
OnePlus Nord 2
OnePlus 6T

Name (Flow 2 B & 3 - Name card)

Name: Flow 2 B & 3 - Name card

Message: May I know your name?

Hint text: Enter your name

Default value: %visitor.name%

Error message: Enter a valid name

Location (Flow 2 B & 3 - Location Card)

Message: Please share your location to schedule the delivery.

Field name: location.option

Show Map text: Share Location

Submit location text: Send my locale

Calendar (Flow 2 B & 3 - Calendar Card)

Message: Please select your preferred date and time to schedule your delivery.

Field name: date.option

Choose calendar type: Single date (selected), Date range

Choose value to select: Date, Date & time (selected)

Allow visitor to change time zone: (checked)

Preview Email Content:

Hi %visitor.name%

Your order for %buy.options% has been successful. The order will reach you on %date.option% at %location.option% as per your preference.

If you face any issue, please contact us at [support@zylkerstore.com]

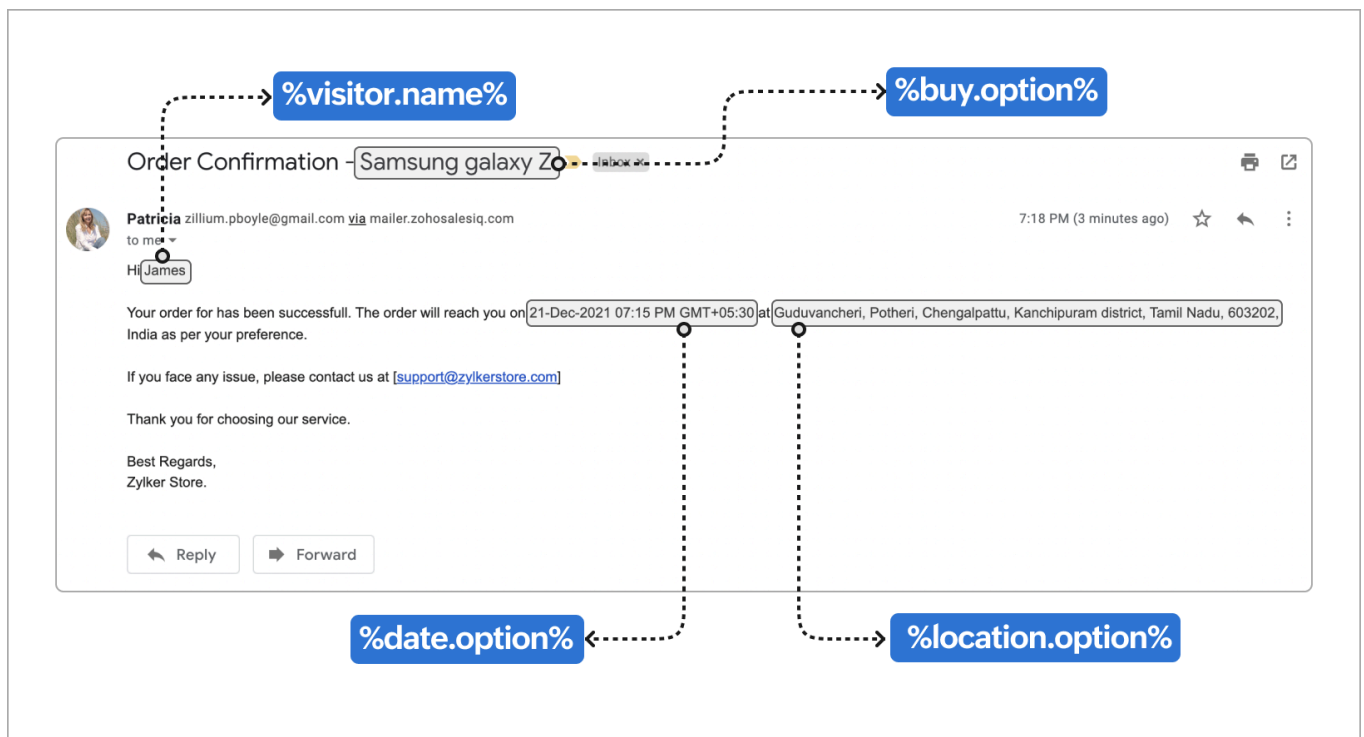

Thank you for choosing our service.

Best Regards,
Zylker Store.

- Here, the name from Name card, email from Email card, choice of product by Multiple options card, Date from the Calendar card, and location from the location card is collected and saved in the respective bot context to use in the Send email card.

Output

- This is the output (Order confirmation mail sent to the visitors) of the above configuration.

💡 Get the custom values that is set using the visitor.info() JS API using the "%visitor.custominfo.{key name}%"

For the below visitor.info() JS API Script,

```
1. <script>
2. $zoho.salesiq.ready=function()
3. {
4.   $zoho.salesiq.visitor.info({"Brand" : "Premium", "Branch": "California"});
5. }
6. </script>
```

The %visitor.custominfo.brand% will fetch and display the value **Premium**.

Visitor fields

- If you want to capture additional information of a visitor other than name, email and phone, the visitor fields can be used.
- The visitor fields is also a variable to save the response from the visitor for a particular card in SalesIQ. This information will be displayed in the operator's dashboard.

- This information can also be pushed to Zoho CRM or Desk (both default and custom fields are supported).
- To save and push the visitor's response, click on Save in visitor fields check box and provide the variable name.

- ❗ To push the visitor's response to Zoho CRM, the visitor field name should be the same as the API name. Similarly, to push the visitor's response to Zoho Desk, the visitor field name should be the same as the label name.

Example

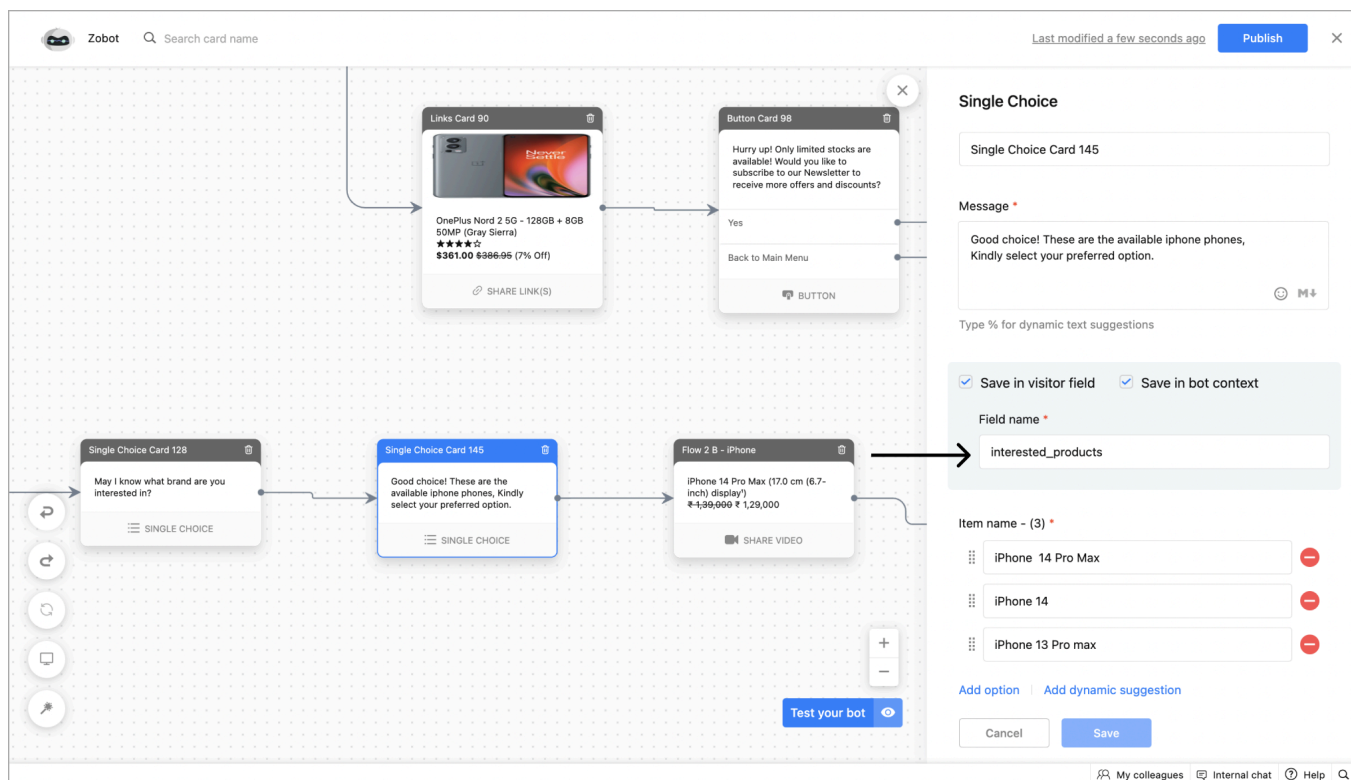

- In the e-commerce business, leads will be created along with their interested or preferred choices of products.

Automate lead generation with SalesIQ's chatbot (Without any code) | Zoho SalesIQ

Watch on

- In the below reference, when the visitors selects the preferred mobile choice, it will be saved in the visitor fields variable (interested_products) and gets pushed to the CRM field.

- The CRM field name and the visitor fields name must be same for this action. Both the default and custom fields for any layouts are applicable for this action.

CRM API Zoho Service Communication (ZSC) Key

← This page will list API names of all the modules, fields, and related lists that can be used in third-party integrations.

Note: You can change the API names of the user created modules, fields, and related lists only.

Filter By: Leads Fields Search Fields or Data Types

Field Label	API Name	Data Type	Custom Field
Annual Revenue	Annual_Revenue	Currency	
Average Time Spent (Minutes)	Average_Time_Spent_Minutes	Decimal	
Branch (city)	Branch_city	Multiselect	✓
Brand	Brand	Single Line	✓
City	City	Single Line	
Company	Company	Single Line	
Country	Country	Single Line	
Created By	Created_By	Single Line	
Days Visited	Days_Visited	Number	
Description	Description	Multi Line (Large)	
Interested Products	interested_products	Single Line	✓
Domine value	Domine_value	Single Line	✓
Email	Email	Email	

Output

- The lead will be created in CRM along with the interested products.

Dynamic text

The dynamic text are pre-defined values & information that is already available in the bot. These texts can be used to enrich the responses and do API tasks using [plugins](#).

Example

- Initially, the value "visitor.name" is available, but the value will be empty as the bot doesn't know the visitor's name.
- So with the name card, we're getting name from the visitor and then using again to provide enriched response.

Bot playground

Output

📄 Type % in the card's message text box/email content to avail all the dynamic variables in the bot.

List of dynamic text that you can use:

Dynamic Text Format	What it represents	Use in welcome card	Use in consequent cards
